

Front Wheel Replacement

Difficulty	Very easy
Steps	3
Time Required	5 - 10 minutes

Tools

- 5 mm Allen Wrench
- All Purpose Cleaner
- Electrical Tape

Step 1 - Removing the damaged wheel

- Tilt the bike up on to the weight holders.

- Use a 5MM allen key to loosen the bolt holding the wheel in place.

Step 2 - Installing the new wheel

- Slide the new wheel into place and install the lead screw into the stabilizer.

- **Be careful to not to over tighten this bolt. If the bolt is over tightened, the wheel will not spin freely.**

Step 3 - Cleaning and re-taping

- Some wheels can be cleaned with an all purpose cleaner and re-taped

- **Wrap the wheel with 2-3 layers of electric tape to keep the wheel clean pre delivery**
