

## Sleep mode

There is a sleep mode on the new mini consoles that can be turned off or on and set to sleep at different time intervals. To change the sleep mode timer on the mini consoles you will need to first hold the + workload button until you hear the screen beep (approximately 5 seconds). Then, while still holding +, hit the enter key. You will have two choices between set up and service, scroll to set up with the + key and select it with enter. Then hit enter until you see sleep, and scroll through the options with the + button. After picking the option you want, hit enter till you get back to the main screen.

## Sound option

To turn sound off press and hold the + button until the unit beeps. Then keep holding + and press the enter button and "set up" should appear on the screen. Press enter until you see sound. Use the + button to change it to off. Then press enter one more time and then press and hold enter to return to the normal mode.
